Cbt Nuggets Vmware Vsphere 6 Vcp6-dcv Download Cbt Nuggets Vmware Vsphere 6 Vcp6-dcv DownloadHi all, I was wondering if anyone could help me with a problem I am having with php5-common. I am trying to make a custom "upgrade_script.php" so that when upgrading to php5, instead of having to do a complete reinstall, I just have to type the following: "php5 -f" => "rm -rf /usr/local/bin/php5 && ln -s /usr/bin/php5-fpm5 /usr/local/bin/php5 && php5 -f" This is a result of a bug that causes this line in php5-fpm.conf to be ignored. I have discovered that in /usr/bin, there is a directory for each php5, but when I try to "ln" php5-fpm5, I get the following error message: ln: cannot overwrite /usr/bin/php5-fpm5 with directory `usr/local/bin/php5-fpm5': Directory not empty. Also, the link is not permanent, so when I try to "ln -f", I get the following error message: Cannot stat: No such file or directory. Any ideas? Thanks praetorian wrote: Hi all, I was wondering if anyone could help me with a problem I am having with php5-common.
