Software Serial Number: {c7e357a1-193a-4be8-84d2-5dbb13fae6ee} New Version. The new version of Rslogix 500 is the next generation in the company's product line. This software integrates with many tools to make data collection quicker and easier than ever before. It also runs on multiple operating systems, including Windows, Linux, and Mac OS X for various users. With this software, you can access your accounting or production data directly from Excel or SQL query results without any hassle. Moreover, this integrated tool supports schematic capture and advanced I/O. Users can take advantage of the advanced simulation capabilities of this software to test their algorithms for automation before deployment in the real-world application. This feature will help you minimize the risk of configuration errors. The software is compatible with Windows 32-bit and 64-bit, including XP, Vista, 7, 8 and 10; Windows Server 2003/2008/2012; RedHat Linux 6.0 - 6.5; Fedora Core 1 - 7; SuSE Linux 7.0 - 9 (defaults for uClinux); Mac OS X 10. 5 - 10.8. ------------------------------- -------- -------------- The new version has commands to enable/disable the uninterruptible power supply (UPS) with the command "enableUPS". This feature saved $50 per computer when they were on 90 minutes of data collection with final data synchronization saving $5 per day. It also allows an independent unit to be included in the configuration file for better scalability and experience required for uninterruptible power supply (UPS) events. The new version of Rslogix 500 is the next generation in the company's product line. This software integrates with many tools to make data collection quicker and easier than ever before.
